2 Key Findings

Test Summary

The executable backend subset passed 4 of 4 checks, so the observed success rate is 100% on the tests that could actually run. No failures or blocked cases were reported, which suggests the public site is stable for the validated homepage and navigation flows. The suite covered footer/social links, a visible navigation link, responsive mobile navigation, and the homepage hero/featured sections, all of which behaved as expected. Because there were no failures or blocked tests, the current run does not show any immediate product-quality regressions in the exercised surface area.

What could be better

There are no concrete failures to call out from this run, and no blocked tests were reported. That said, the test coverage is still narrow: it validated public homepage and navigation behavior only, not authenticated flows, data mutations, error states, or deeper content pages. A clean pass on these checks does not guarantee that backend routes, form handling, or edge cases are healthy. Expanding coverage into critical user journeys and API endpoints would better expose hidden regressions before they reach users.

Recommendations

Keep the current implementation as-is for now, since the run is clean. Next, broaden automated coverage beyond the homepage to include higher-risk areas such as form submissions, route transitions, and any API-backed flows that users rely on. Add negative-path tests and authenticated scenarios if the product supports them, so future runs can catch regressions that a simple public-page smoke suite will miss. If you want a copy-ready plan for a coding agent, the `fixPrompt` panel will be empty here because there are no actionable defects from this run.

Backend Endpoint Tests

3 Test Coverage Summary

API NAME	TEST CASES	TEST CATEGORY	PASS/FAIL RATE
https://umrahqu.vercel.app/	4	4 functional	4 Pass / 0 Fail

Note
The test cases were generated based on the API specifications and observed behaviors. Some tests were adapted dynamically during execution based on API responses.

4 Test Execution Summary

Https://Umrahqu.Vercel.App/ Execution Summary

TEST CASE	TEST DESCRIPTION	IMPACT	STATUS
-----------	------------------	--------	--------

functional				
Display footer and social links	Open the homepage and verify the footer includes contact details, internal links, and social media entries as described for the marketplace landing page.	Medium	Passed	
Open a visible navigation link	Open the homepage and click a visible navigation link such as search, login, or a featured package link, then confirm the click target is reachable from the landing page.	High	Passed	
Show responsive mobile navigation	Open the homepage on a mobile viewport and confirm the hamburger menu, navigation items, and layout remain usable without horizontal scrolling.	High	Passed	
Render homepage hero and featured sections	Open the homepage and confirm the hero section, featured content, and marketplace landing elements render successfully with no missing primary content.	High	Passed
